

FEATURES

- ♦ Ultra wide input voltage range, 18~106V
- ♦ 200W Output @ 18V~27V Vin range
- ♦ 300W Output @ 27~106V Vin range (Including 27V)
- ♦ Full Load Efficiency up to 91.0% @48Vin
- ♦ Intergrated fuse holder
- ♦ Parallel Connection of multiple units
- ♦ Box type package with metal base plate
- ♦ Package Dimension:
190.0x76.0x44.0mm (7.48"x2.99"x1.73")
- ♦ Operating Temperature Range - 40°C to +75°C
- ♦ Input Reverse Polarity Protection
- ♦ Minimized Inrush current
- ♦ Input UVLO, Output OCL, SCP, OVP, OTP
- ♦ Enable on/off (option)
- ♦ 2250VDC Isolation
- ♦ IP67 protection for selective model
- ♦ RoHs Compliant
- ♦ ISO 9001, ISO 14001 certified manufacturing facility
- ♦ UL60950
- ♦ CE Mark
- ♦ EMC compatible: EN12895, CISPR11 ClassA
- ♦ Electrical transient conduction: ISO7637-2

The B62SR24125, a ultra wide input voltage range of 18~106V, and single isolated output converter, is the latest product offering from a world leader in power systems technology and manufacturing — Delta Electronics, Inc. Such box type DCDC converter can provide 300W (200W at Vin < 27V), 24.5V regulated DC output voltage with full load efficiency up to 91.0% @48Vin; The B62SR24125 offers input UVLO, output over current limit, short circuit, output over voltage, over temperature, and input reverse polarity protections. It has an option for intergrated fuse holder and enable on/off function. It also has parallel function; and allows a wide operating temperature range of -40°C to +75°C. With creative design technology and optimization of component placement, this converter possess outstanding electrical and thermal performance, as well as high reliability under extremly harsh operating conditions. The B62SR24125 meets IP67 protecion (refer to "water protection level" specification).

FEATURES DESCRIPTIONS

Output Over-Current Limit and Short Protection

The modules include internal output over-current limit (OCL) and short circuit protection (SCP) circuits, the OCL set point is lower than that of the SCP; The response of SCP circuit is much fast than that of the OCL circuit. The slowly increase of the output current will let module enter OCL protection when the current exceeds the OCL set point, while the fast increase of the output current will let module enter SCP when the current exceeds the SCP set point.

When the modules enter OCL protection, the output voltage will decrease while the output current is kept constant, the output voltage will soft start to set point when the overload condition is removed.

The module will enter hiccup mode when it triggers the SCP set point. The module will try to restart after shutdown. If the overload condition still exists, the module will shut down again. This restart trial will continue until the overload condition is removed.

Output Over-Voltage Protection

The power module includes an internal output over-voltage protection(OVP) circuit, which monitors the voltage on the output terminals. If this voltage exceeds the OVP set point, the module will shut down, and then restart after a fixed delay time (hiccup mode), please refer to figure6 for detail.

Over-Temperature Protection

The over-temperature protection consists of circuitry that provides protection from thermal damage. If the temperature exceeds the preset temperature threshold the module will shut down and enter into latch mode, and all components will not exceed their absolute maximum temperature ratings.The module will not recover until the input source is powered on again.

Remote On/Off

B62SR24125C has Enable control function. This Enable PIN is designed on the primary side of converter, the converter will turn on when the Enable PIN connected to VIN+, and turn off when the Enable PIN connected to VIN- or floating.

Enable logic	Notes and Conditions	Min.	Typ.	Max.	Unites
1 Enable logic on	For C	14			V
2 Enable logic off	For C			5	V
3 Enable input pull down resistor ($I=V_{in}/R$)	For C	300k		400k	ohm

Figure 12: suggested Enable connection

Input Reverse Voltage Protection

The input reverse voltage protection is provided by an diode on the input line, the standoff voltage for the reverse protection shall be no less than -106V.

DESIGN CONSIDERATIONS

Parallel connection of multiple units

Two units parallel operation is verified, please contact Delta if more than two units need to be paralleled. While paralleling multiple units, the impedance of the cables from unit to junction point of each unit should be within $\pm 5\%$ of each other.

Figure 13: suggested parallel connections

EMC

The converter has the internal EMI filters and meet the EMC standards EN12895 30-100MHz 34-45dBuV/m. The test result is showed as below

Conditions: Vin=48V, Io=12.5A, 10m measure distance

Figure 14: test result(Vertical)

Figure 15: test result(Horizontal)

Fuse replacement

For the versions with the intergratted the fuse holder, when the fuse needs to be replaced, it can be taken down in an anticlockwise direction by slotted type screwdrivers .

Recommended fuse replacement P/N:

THERMAL CONSIDERATION

The following figure shows the location to monitor the temperature of base plate. Before customer decides to use this DCDC converter, a thermal evaluation need to be done to make sure the temperature of base plate is lower than that read from below thermal curves (Figure23~27 base on different input voltage).
