+5Vsb is a standby output voltage that is always active whenever AC power is present. +5Vsb supplies 1.0A current in normal operation and is capable of withstanding maximum 10W (2 Amps) peak power for 10 seconds. +5Vsb provides a power source for circuits that must remain operational when DC main output is in sleep/off state. +5Vsb over current protection is built internal to its controller. 5Vsb OCP trip point is set to be within 2.5A - 5A. 5Vsb OVP is clamp.

Parallel Operation Instructions *

- 1.) Follow wiring diagram below
- 2.) No external oring diodes needed, oring diodes are built in with current share option
- 3.) Keep wires as short as possible to avoid noise pickup

*Notes: Applications for increased power not to exceed 800 Watts
Parallel operation of PMK450 not recommended for Medical Applications due to increased leakage current
