

RM15W- L shape bent plug packing specification change document

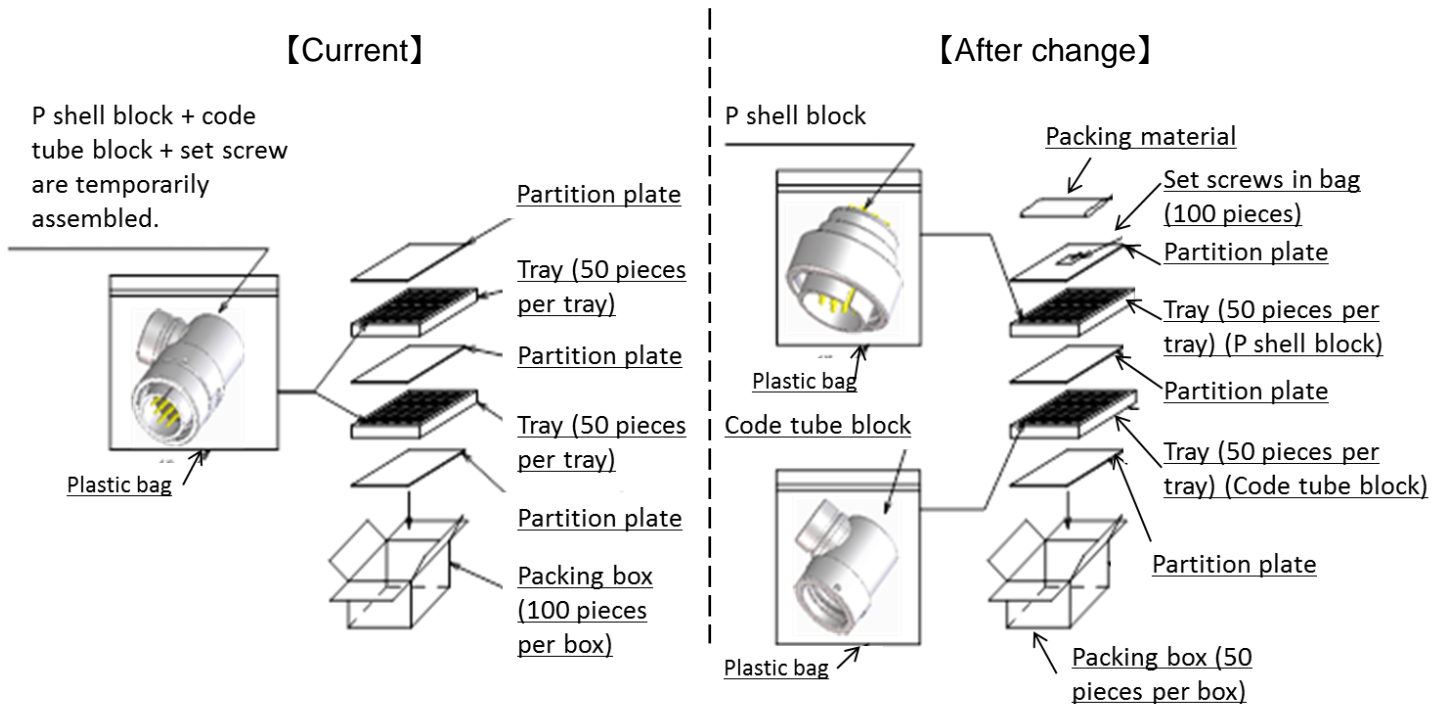

The RM15 product's L-shape bent plug is shipped with the shell unit and cord tube, which are temporarily assembled as shown below. Currently, customers work on wiring after disassembling the products that have been temporarily assembled and delivered. In order to eliminate the disassembly work by this customer, we plan to change the packing to separate the shell unit and cord tube block. We would appreciate your understanding.

1. Target product

Please refer to the next page for 11 target products.

2. Changes in packing specifications

As shown in the figure below, products are currently delivered in a tray after being packed in a bag in temporarily assembled state. When we change the packing method, we will separately pack the P shell unit and cord tube block and deliver. Required quantity of set screws for fixing the P shell unit and the cord tube will be packed in bag and pasted on the partition plate as an appended article that comes to the top when unpacking.

3. Time to change

We would like to naturally shift from the production in December 2019.

4. Delivery specifications

Since the set screws will be attached, the contents of the drawing will be changed. In addition, if packaging specifications are provided for individual customers, the packaging specifications will be changed as described above, thus re-submission is required. If necessary, please make a request by using the request form to the R-engineering (Circular connector) section individually.

5. Target product list

Target 11 products are as follows.

CL	Name 品名
109-0020-0-31	RM15WTLP-10P(31)
