

Product Change Notice

September 14, 2022

This is an official notice that the following Amphenol RF parts will have a change in material and appearance once our current stock of insulators is depleted. Please continue to use existing parts you may have in your inventory until they are gone.

The material of the original insulator was phenolic and yellow in color, and it will now be Plenco and black after the change.

Plenco 01581 is a glass and mineral reinforced pelletized polyester molding compound, exhibiting excellent dimensional stability, mechanical strength, arc resistance, track resistance, and flammability ratings. UL recognized under component file E40654.
