

## CLX-20-16-F

Ruland CLX-20-16-F, 1-1/4" x 1" Rigid Coupling, Black Oxide Steel, One-Piece Clamp Style, 2 1/16" OD, 3 1/4" Length

## Description

Ruland CLX-20-16-F is a one-piece rigid coupling with 1.2500" x 1.0000" bores, 2 1/16" OD, and 3 1/4" length. Proprietary Nypatch® antivibration coating on hardware allows for even seating of the screw, repeated screw installations, prevents galling, and maintains high holding power. It eliminates the need to treat screws upon receipt greatly reducing installation time. Forged screws test beyond ANSI standards to ensure maximum holding power. Tightly controlled bore tolerance of +.002"/+.0005" is maintained. CLX-20-16-F is made from 1215 lead-free steel with a proprietary black oxide finish that produces a fine glossy finish while increasing holding power and resisting corrosion. It is machined from solid bar stock that is sourced exclusively from North American mills and is RoHS3 and REACH compliant. CLX-20-16-F is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

## **Product Specifications**

Small Bore (B2	2) 1.0000 in
B2 Max Shaft F	Penetration 1.625 in
Bore Tolerance	e +0.0020 in / +0.0005 in
Clearance Diar	neter (C) MAX 2.286 in
0.0005 in Forged Clamp	Screw 1/4-28
ith Nypatch® Hex Wrench Si	<b>ze</b> 3/16 in
Seating Torque	e 170 lb-in
Number of Scr	ews 4 ea
Moment of Ine	rtia 1.4029 lb-in <sup>2</sup>
Full Bearing St	upport Required? No
Zero-Backlash	? Yes
Steel Bar Temperature	-40°F to 350°F (-40°C to 176°C)
Black Oxide, <b>Manufacturer</b> with Naphthenic Oil, Dried	Ruland Manufacturing
Weight (Ibs)	2.032600
Tariff Code	8483.60.8000

	hemical Ethylene Thiourea, known to the State of reproductive harm. For more information go to

- 1. Align the CLX-20-16-F one-piece rigid coupling on the two shafts to be connected. There should be no misalignment.
- 2. Tighten the Nypatch® screws in two stages, starting with the inside screws. Using a 3/16 in torque wrench, tighten the inside screws to 85 lb-in which is half the recommended seating torque. Repeat for the outside screws, again tightening to half of the recommended seating torque.
- 3. Tighten the screws to the full recommended seating torque of 170 lb-in following the same pattern, starting with the inside screws first.
