Obsolescence Notice

ARM

Dear ARM development tools customer,

ARM announces the end of life of the RealView ICE (RVI) and RealView Trace 2 (RVT2) products. Their components are now obsolete and our new DSTREAM and DS-5 solutions have superseded these products.

The DSTREAM target connection unit retains the core features of RVI and RVT2, while offering important new benefits and functionality:

Greater value and convenience
- *Trace now comes as standard and requires no further investment*
- *New physical design ensures more robust, fast and quiet operation*

Ease of use and reliability
- *Unique connection pod offering native support for all common debug and trace target connectors, and easier attachment to the target*
- *Improved software reliability through a significantly extended 4GB trace buffer which enables non-intrusive debug of random time-related software bugs*

Shorter development time and time-to-market
- *70% faster upload of application code to target memory and higher code stepping speed*

More detailed information on DSTREAM can be found here.

If DSTREAM is purchased together with the new [ARM Development Studio 5 (DS-5)](here) Pro Edition.
Why invest in DS-5 Pro?
DSTREAM is compatible with RVDS 4.1, DS-5 Pro delivers significant advantages over RVDS:

Comprehensive solution
- *Complete multi-core, extensible development suite*
- *Support for all the latest ARM Cortex processors and CoreSight debug and trace components*
- *OS-aware debug and performance analysis on Linux and Android-based targets*

Easy to use and deploy
- *Pre-configured debug support for the latest ARM-based SoCs such as OMAP4, Tegra2 and Zynq-7000 means 1-click target connection*
- *A safe investment, integrating with your development flow through the industry standard Eclipse platform and python scripting language*

Market –leading user experience
- *Click here to see the DS-5 Debugger and Streamline performance analyzer in action*
- *DS-5 comfortably outsells RVDS and is now ARM's best-selling development tool suite.*
