<b>Description of change:</b>	<p>To work around ELS31-V module limitations (AT^SLED paramter is stored only volatile, and is lost at each restart), the LAN OpenWRT subsystem was updated to the -v-r47, to handle the setting of AT^SLED at each re-start.</p> <p>Furthermore, for IP connections IPV4V6 is used rather than IPV4 only, to enable usage of private APNs in the VzW network.</p> <p>These changes are not approval relevant and done on application layer only. The ELS31-V module and its FW are unchanged.</p>
