STM32 ULTRA-LOW-POWER DNA ARM® CORTEX®-M0+

The STM32L0 is the best match for energy harvesting, coin-cell battery or energy sensitive applications.

Combining a genuine ultra-low-power architecture with low-current analog peripherals and four lowpower modes, the STM32L0 is ideal for applications such as mice, keyboards, gas/water meters, building automation, alarm detectors and health care or fitness applications.

For applications that require a 15- to 20-year life duration or need to run in extermly high temperature conditions, the STM32L0 is the best choice thanks to ST's CMOS process technology.
