Subject: Notification of UPC Code Format Upgrade to Code 128

Document# LFPCN_PG0084

Date: 05/26/2017

This letter is to inform Littelfuse Sales, Sales Support & Customers of a bar code formatting update that is being made to the printing of our fuse box labels. Littelfuse is upgrading to a new globally accepted format known as 'Code 128', from our legacy format, 'Interleaved 2 of 5' for targeted Series. This high-density format allows for more data to be imbedded in a smaller footprint, and along with our increased print resolution will improve the scanning process for customers. For a complete listing of the affected Series, please see page two. Below is an example of the new & old versions of a typical box label.

OLD

NEW

In conjunction with this formatting upgrade some scanners, especially older generation, may need to be reprogrammed to be able to read the new formatted labels when receiving in product. Please consult with your scanner provider for details on how to make the update. No changes have been made to the numeric UPC reference numbers associated with each part number. This change only updates the printing of the bar code on the label.

Should you have any questions, or need additional assistance, please contact your Littelfuse customer service representative.
