However, complete effect is not guaranteed because some areas on the board are not coated.

\*Read instruction manual carefully, before using the power supply unit.

=NOTES=

- \*1. Ta=25°C, nominal output voltage and maximum output power.
- \*2. For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 - 240VAC (50-60Hz).
- \*3. Not applicable for the inrush current to Noise Filter for less than 0.2ms.
- \*4. Refer to Fig. A for measurement of ripple voltage.
- \*5. 85 - 265VAC, constant load.
- \*6. No load - Full load, constant input voltage.
- \*7. Over current protection (OCP) mode is selectable, "Constant current limit with automatic recovery" or "Output shutdown".  
Manual reset is executed by "Re power on" or "Restart by remote on/off control". OCP point can be adjusted by communication function.  
Avoid to operate at over load or short circuit condition.
- \*8. Over voltage protection (OVP) mode is selectable, "Automatic recovery" or "Output shutdown".  
Manual reset is executed by "Re power on" or "Restart by remote on/off control". OVP point can be adjusted by communication function.
- \*9. Measured by the each measuring method of UL, CSA, EN and Den-an (at 60Hz), Ta=25°C.
- \*10. Output Derating
  - When ambient temperature is more than 40°C, refer to OUTPUT CURRENT vs. AMBIENT TEMPERATURE (A263-01-02/HDA\_).
  - When input voltage is less than 170VAC. Refer to OUTPUT POWER vs. INPUT VOLTAGE (A263-01-02/HDA\_).
- \*11. The power supply is considered a component which will be installed into a final equipment.  
The final equipment should be re-evaluated that it meets EMC directives.
- \*12. Refer to instruction manual (A263-04-01\_).
- \*13. Using 4 Mount Holes at bottom side.
- \*14. At -40 - -20°C, the electrical characteristics are not guaranteed.
- \*15. Category 4 exposure levels : Track transportation over US highways, Composite two-wheeled trailer.

**OUTPUT DERATING**

Ta (°C)	OUTPUT CURRENT (%)
	MOUNTING A-D
-20 - +45	100
40	100
70	40

INPUT VOLTAGE (VAC)	OUTPUT POWER (%)
	MOUNTING A-D
85	60 (360W)
100	83 (500W)
<170	83 (500W)
170≤	100 (600W)

=NOTES=

Use so that both of 1. and 2. shall be satisfied.

1. Derating is necessary to output current in case of ambient temperature more than 40°C. (Fig.1)

2. Derating is necessary to output power in case of input voltage less than 170VAC. (Fig.2)

For example, in case of input voltage 100VAC and ambient temperature 50°C and mounting A at 24V model .

According to 1. ambient temperature derating, output current limit is 80% (20.0A). ---(1)

According to 2. input voltage derating, output power limit is 500W. ---(2)

When  $V_o \leq 25.0V$ , the derating is determined by output current (1). Because output power is less than 500W ( $25.0V \times 20.0A$ ).

When  $V_o > 25.0V$ , the derating is determined by output power (2).
