Important Notice Product Phase-out 8943.W Series 4300.0603

Thanks to innovative ideas with a focus on future markets, SCHURTER continually strives to improve products through-out the various part series we offer. For these reasons, SCHURTER is phasing out the 8943.W Series, part-number 4300.0603. The good news is SCHURTER offers the 4781.0010, which SCHURTER feels is a superior alternative. The 4781 contact system increases the pull-out force of the wires and improves the contact resistance, which makes it easier to fulfill the requirements of IEC 60320 regarding plug-in and pullout forces.

Besides a cleaner and tighter connection, the 4781 series also has a higher operating temperature of 120 °C and can accommodate 18 AWG and 14 AWG wires.

The last order date for the part listed is February 28, 2015.

On the SCHURTER website, the data sheets for the 4300.0603 is marked with a phase-out watermark as shown in Figure 1 and informs customers of the recommended replacement part as seen in Figure 2.

For any technical questions, please email Nikila Kareesan at nkareesan@schurterinc.com, or you can call her at 800-848-2600.
