Change Notification

Transfer of Conformal Tantalum Capacitor Production

Production of the conformal Tantalum capacitor series (F72, F75 and F95) will be transferred from the AVX Japan operations to the AVX El Salvador facility within 2019.

The transfer will begin mid-summer with completion target and final approval by January 2020.

This transfer is necessary to maintain current market pricing and avoid potential increases due to fluctuations in material cost. The move will also permit the expansion of growth products at our Japan facility.

Our IATF 16949 certified El Salvador facility would utilize the same equipment, materials, and processes as Japan, no change to form, fit, function or reliability of the product.

A buffer program has been initiated to avoid any supply interruption. Contact your local AVX representative for further details.
