

Kinetis KM3x – Metrology MCUs based on ARM® Cortex®-M0+ Core

Up to 256 KB Flash and 32 KB SRAM

1. Kinetis M family

Kinetis KM metering MCUs expand the successful line of Kinetis MCUs based on the ARM® Cortex™-M0+ core. The KM series supports low-cost, highly integrated solutions for one-, two-, and three- phase meters with a high accuracy sigma-delta ADC metering front end.

Kinetis KM metering MCUs address specific regional needs including neutral disconnect or split phase for North America and Japan. Full metrology software, including time or filter based, is provided as well as fast Fourier transform. These devices include high electrostatic discharge immunity with high accuracy RTC with less than 5 ppm drift over temperature.

Standard Tower System boards and regional reference designs with complete software libraries are available for design evaluation.

2. Kinetis KM3x subfamily

The Kinetis KM3x MCU family adds a segment LCD controller in addition to the Kinetis KM1x series. The Kinetis KM3x MCU family includes KM33 series and KM34 series with the key difference of 24 bit sigma-delta model number to address metering requirement from different region.
