

## H-bridge motor driver for automotive DC motor driving

Datasheet - production data

### Features

Type	$R_{DS(on)}$	$I_{out}$	$V_{CCmax}$
VNHD7008AY	8 m $\Omega$ typ (per channel)	51 A	38 V

- AEC-Q100 qualified
- Output current: 51 A
- Dual fully protected HSD with MultiSense feedback
- Two integrated drivers for the external LSDs
- 3 V CMOS compatible inputs
- Protections:
  - Undervoltage shutdown
  - Overvoltage clamp
  - Thermal shutdown
  - Load current limitation
  - Self-limiting of fast thermal transients (Power Limitation)
  - Cross current protection
  - Shoot through protection
  - Loss of ground and loss of  $V_{CC}$
  - Electrostatic discharge protection
  - Drain and source voltage monitoring of the external power MOSFETs, configurable via an external resistance (short-to-battery protection)
- PWM operation up to 20 kHz for external LSDs
- MultiSense monitoring functions
  - Analog motor current feedback
  - Chip temperature monitoring
  - Battery voltage monitoring

- MultiSense diagnostic functions
  - Output short to ground detection
  - Thermal shutdown indication
  - OFF-state open-load detection
  - Output short to  $V_{CC}$  detection
- Standby mode
- Half bridge operation
- Charge pump output for reverse battery protection
- Package: ECOPACK

### Description

The device is a DC motor driver for automotive applications. It integrates a full protected dual high-side driver and the drivers and protections for the two external power MOSFETs in low-side configuration.

The device is designed using STMicroelectronics well known and proven proprietary VIPower<sup>®</sup> M0 technology that allows to efficiently integrate on the same die a true PowerMOSFET with an intelligent signal/ protection circuitry. The device is housed in a PowerSSO-36 exposed pad package to optimize the dissipation performances.

The input signals  $IN_A$  and  $IN_B$  can directly interface the microcontroller to select the motor direction and the brake conditions. Two selection pins (SEL0 and SEL1) are available to address to the microcontroller the information available on the MultiSense. The MultiSense pin allows to monitor the motor current, provides a voltage proportional to the battery value and the information on the temperature of the chip. The integrated protections are: load current limitation, overload active power limitation (with latch-off), overtemperature shutdown (with latch-off) and cross current protection.

# 1 Block diagram and pin description

Figure 1. Block diagram

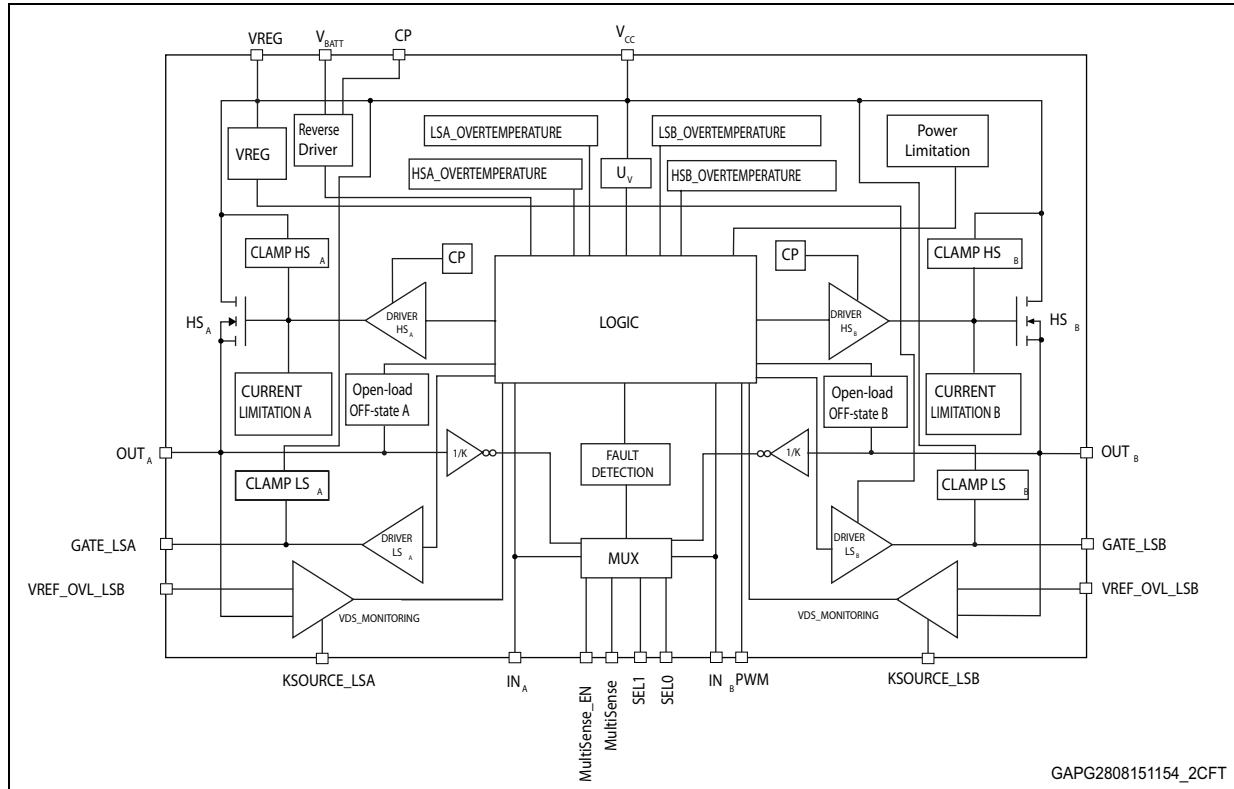

Table 1. Block description

Name	Description
Logic control	Allows the turn-on and the turn-off of the high-side and the low-side switches according to the truth table.
Undervoltage (U <sub>S</sub> )	Shuts down the device for battery voltage below (4 V).
High-side and low-side clamp voltage	Protect the high-side and the low-side switches from the high voltage on the battery line.
High-side and low-side driver	Drive the gate of the concerned switch to allow a proper R <sub>On</sub> for the leg of the bridge.
Current limitation	Limits the motor current in case of short circuit.
High-side overtemperature protection	In case of short-circuit with the increase of the junction temperature, it shuts down the concerned driver to prevent degradation and to protect the die.
VDS_MONITORING	Protection of LSD powers against short to battery failure
VREG	Internal voltage regulator that provides the supply for the gates of the external low-side switches
Fault detection	Signals an abnormal condition of the power stage (output shorted to ground or output shorted to battery) by a feedback on the MultiSense

Table 1. Block description (continued)

Name	Description
Power limitation	Limits the power dissipation of the high-side driver inside safe range in case of short to ground condition.
Open-load in OFF-state	Signalize, in combination with an external resistor, an open-load when the switches are off by a feedback on the MultiSense
T <sub>chip</sub> monitoring	Provides a signal linked to the Chip temperature by a feedback on the MultiSense
V <sub>CC</sub> monitoring	Provides a signal linked to the Chip temperature by a feedback on the MultiSense
Reverse driver	Drives an external PowerMOSFET to provide the reverse battery protection
CP	Charge pump to drive the external N-MOSFET used on the battery track for the reverse battery protection. The N-MOSFET source must be connected to the V <sub>batt</sub> pin.

Figure 2. Configuration diagram (top view)

Table 2. Pin definitions and functions

Pin N°	Symbol	Function
20	PWM	PWM input.
25	VREG	Internal supply output
16	IN <sub>A</sub>	Clockwise input.
18	V <sub>batt</sub>	Battery supply, connection to the source of the external PowerMOS used for the reverse battery protection
19	MultiSense	Output of current sense and diagnostic feedback
12	MultiSense_EN	Enables the MultiSense diagnostic pin
11	SEL0	Address the MultiSense multiplexer (refer to <a href="#">Table 12</a> )
26	SEL1	Address the MultiSense multiplexer (refer to <a href="#">Table 12</a> )
21	IN <sub>B</sub>	Counter clockwise input.
1, 2, 3, 4, 5, 6, 7, 8, 9, 10	OUT <sub>A</sub>	Source of high-side switch A
27, 28, 29, 30, 31, 32, 33, 34, 35, 36	OUT <sub>B</sub>	Source of high-side switch B
17	CP	Drives the gate of external P-MOSFET for the reverse battery protection
15	VREF_OVL_LSA	Sets the threshold for VDS_MONITORING feature for LSA
22	VREF_OVL_LSB	Sets the threshold for VDS_MONITORING feature for LSB
13	GATE_LSA	Gate driver of the external PowerMOS LSA
24	GATE_LSB	Gate driver of the external PowerMOS LSB
14	KSOURCE_LSA	Source of external LSA. Ground connection
23	KSOURCE_LSB	Source of external LSB. Ground connection
TAB	V <sub>CC</sub>	Supply voltage. Drain of the high-side switches and connection to the drain of the external PowerMOS used for the reverse battery protection

Table 3. Suggested connection for unused and not connected pins

Connection / pin	OUTA, OUTB	Inx, PWM, SELx, Multisense_EN	Multisense	GATE_LSA, GATE_LSB, CP, VREG	VREF_OVL_LSA, VREF_OVL_LSB
Floating	X	X	X	X	X
To ground	Not allowed	Through 10 kΩ resistor		Not allowed	X

## 2 Electrical specifications

Figure 3. Current and voltage conventions

### 2.1 Absolute maximum ratings

Stressing the device above the rating listed in [Table 4](#) may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Table 4. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V <sub>CC</sub>	H-Bridge supply voltage	38	V
V <sub>BAT</sub>	Maximum battery voltage <sup>(1)</sup>	-16 to 38	V
I <sub>max</sub>	DC output current	Internally limited	A
I <sub>R</sub>	Reverse output current (continuous) <sup>(2)</sup>	30	A
I <sub>IN</sub>	Input current (IN <sub>A</sub> and IN <sub>B</sub> pins)	-1 to 10	mA
I <sub>SEL</sub>	SEL <sub>0,1</sub> DC input current	-1 to 10	mA
I <sub>PWM</sub>	PWM Input current	-1 to 10	mA
I <sub>MultiSense_EN</sub>	SenseEnable DC input current	-1 to 1.5	mA
I <sub>MultiSense</sub>	MultiSense pin DC output current (V <sub>GND</sub> = V <sub>CC</sub> and V <sub>SENSE</sub> < 0 V)	10	mA
	MultiSense pin DC output current in reverse (V <sub>CC</sub> < 0 V)	-20	mA
V <sub>REG</sub>	V <sub>REG</sub> DC voltage	12	V

**Table 4. Absolute maximum ratings (continued)**

Symbol	Parameter	Value	Unit
V <sub>CP</sub>	V <sub>CP</sub> DC voltage	V <sub>BATT</sub> -6 to V <sub>BATT</sub> +14	V
VGATE_LSx	GATE_LAS, GATE_LSB DC voltage	12	V
VREF_OVL_LSx	VREF_OVL_LSA, VREF_OVL_LSB input current	-1 to 10	V
V <sub>ESD</sub>	Electrostatic discharge (Human body model: R = 1.5 kΩ; C = 100 pF) – MultiSenseVREG, VREF_OVL_LSx – IN <sub>A</sub> , IN <sub>B</sub> , OUT <sub>A</sub> , OUT <sub>B</sub> , PWM, SEL0, SEL1, SENSE_EN – GATE_LSx	2 4 4	kV
T <sub>C</sub>	Junction operating temperature	-40 to 150	°C
T <sub>STG</sub>	Storage temperature	-55 to 150	°C
I <sub>K_SOURCE_LSx</sub>	DC reverse ground pin current (per leg)	100	mA

1. This applies with the n-channel MOSFET used for the reverse battery protection. Otherwise V<sub>BAT</sub> has to be shorted to V<sub>CC</sub>.

2. Based on the internal wires capability.

*All logic pins cannot be left floating but they must be connected to GND if unused.*

## 2.2 Thermal data

**Table 5. Thermal data**

Symbol	Parameter	Max. value	Unit
R <sub>thj-case</sub>	Thermal resistance junction-case (per leg channel) (JEDEC JESD 51-8)	2.4	°C/W
R <sub>thj-amb</sub>	Thermal resistance junction-ambient (JEDEC JESD 51-5) <sup>(1)</sup>	50.6	°C/W
R <sub>thj-amb</sub>	Thermal resistance junction-ambient (JEDEC JESD 51-7)	16.6	°C/W

1. Device mounted on two-layers 2s0p PCB with 2 cm<sup>2</sup>.heatsink copper trace.

## 2.3 Electrical characteristics

$V_{CC} = 7\text{ V}$  up to  $28\text{ V}$ ;  $-40\text{ °C} < T_j < 150\text{ °C}$ , unless otherwise specified.

**Table 6. Power section**

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
$V_{CC}$	Operating supply voltage		4		28	V
$I_S$	Supply current	Off-state standby $I_{N_A} = I_{N_B} = PWM = \text{Multisense\_EN} = 0$ ; $SEL_{0,1} = 0$ ; $T_j = 25\text{ °C}$ ; $V_{CC} = 13\text{ V}$			1	$\mu\text{A}$
		Off-state standby; $I_{N_A} = I_{N_B} = PWM = \text{Multisense\_EN} = 0$ ; $SEL_{0,1} = 0$ ; $V_{CC} = 13\text{ V}$ ; $T_j = 85\text{ °C}$			1	$\mu\text{A}$
		Off-state standby; $I_{N_A} = I_{N_B} = PWM = \text{Multisense\_EN} = 0$ ; $SEL_{0,1} = 0$ ; $V_{CC} = 13\text{ V}$ ; $T_j = 125\text{ °C}$			10	$\mu\text{A}$
		Off-state (no standby) $I_{N_A} = I_{N_B} = PWM = \text{Multisense\_EN} = 0$ ; $SEL_{0,1} = 5\text{ V}$		4	8	mA
		On-state: $I_{N_A}$ or $I_{N_B} = 5\text{ V}$ ; $PWM = 0\text{ V}$ or $PWM = 5\text{ V}$ ; $SEL_0 = 0$ or $SEL_0 = 5\text{ V}$ ; $SEL_1 = 0$ or $SEL_1 = 5\text{ V}$		6	12	mA
		On-state: $I_{N_A} = I_{N_B} = 5\text{ V}$ ; $PWM = 0\text{ V}$ or $PWM = 5\text{ V}$ ; $SEL_0 = 0$ or $SEL_0 = 5\text{ V}$ ; $SEL_1 = 0$ or $SEL_1 = 5\text{ V}$		9	18	mA
$t_{D\_STBY}$	Standby mode blanking time	$V_{CC} = 13\text{ V}$ ; $I_{N_A} = I_{N_B} = SEL_1 = \text{MultiSense\_EN} = PWM = 0\text{ V}$ ; $V_{SEL0}$ from $5\text{ V}$ to $0\text{ V}$ .	60	300	550	$\mu\text{s}$
$R_{ONHS}$	Static high-side resistance	$I_{OUT} = 12\text{ A}$ ; $T_j = 25\text{ °C}$ , $V_{CC} = 13\text{ V}$		8		m $\Omega$
		$I_{OUT} = 12\text{ A}$ ; $T_j = -40\text{ °C}$ to $150\text{ °C}$			16	m $\Omega$
		$V_{CC} = 4\text{ V}$ , $I_{OUT} = 12\text{ A}$ , $T_j = 25\text{ °C}$		8		
$V_f$	High-side free-wheeling diode forward voltage	$I_{OUT} = -12\text{ A}$ ; $T_j = 150\text{ °C}$		0.6	0.7	V
$I_{L(off)}$	Off-State Output current of one output	$I_{N_A} = I_{N_B} = PWM = 0$ ; $V_{OUT} = 0\text{ V}$ ; $V_{CC} = 13\text{ V}$ ; $T_j = 25\text{ °C}$	0		0.5	$\mu\text{A}$
		$I_{N_A} = I_{N_B} = PWM = 0$ ; $V_{OUT} = 0\text{ V}$ ; $V_{CC} = 13\text{ V}$ ; $T_j = 125\text{ °C}$	0		5	$\mu\text{A}$
$I_{L(off\_h)}$	Off-state output current of one output with other HSD on	$I_{N_A} = PWM = 0$ ; $I_{N_B} = 5\text{ V}$ ; $V_{CC} = 13\text{ V}$	20		60	$\mu\text{A}$

**Table 7. Logic inputs (IN<sub>A</sub>, IN<sub>B</sub>) (V<sub>CC</sub> = 7 V up to 28 V; -40 °C < T<sub>j</sub> < 150 °C)**

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit

					X	$V_{OUTB} < V_{OL}$	1	Hi-Z	<b>Case1: open-load</b> in full Bridge configuration with an external pull-up on $OUT_A$ <b>Case 2. NO open-load</b> in half Bridge configuration with external pull-up on $OUT_B$ (motor connected between Out and Ground)

*Note:* To power on the device from standby, it is recommended to: toggle INA or INB or SEL0 or SEL1 from 0 to 1 first to come out from STBY mode; toggle PWM from 0 to 1 with a delay of 20 microsecond this avoids any overstress on the device in case of existing short-to-battery.

## 3 Protections

### 3.1 Power limitation (high-side driver)

The basic working principle of this protection consists of an indirect measurement of the junction temperature swing  $\Delta T_j$  through the direct measurement of the spatial temperature gradient on the device surface in order to automatically shut off the output MOSFET as soon as  $\Delta T_j$  exceeds the safety level of  $\Delta T_{j\_SD}$ . The protection prevents fast thermal transient effects and, consequently, reduces thermo-mechanical fatigue. When Power Limitation is reached, The device enters in latch mode and generates the Fault Flag on Multisense = VsenseH when the faulty leg diagnostic is selected (please refer to [Table 13](#)).

### 3.2 Thermal shutdown

In case the junction temperature of the device exceeds the maximum allowed threshold (typically 175°C), the device enters in latch mode and generates the Fault Flag on Multisense = VsenseH (please refer to [Table 13](#)). The concerned high side can be switched ON again as soon as:  $T_j$  drops below TTR\_HSD, INX is set low for a duration > TLATCH\_RST\_HS and set high again.

### 3.3 High-side current limitation

The device is equipped with an output current limiter in order to protect the silicon as well as the other components of the system (e.g. bonding wires, wiring harness, connectors, loads, etc.) from excessive current flow. In case of short circuit, overload or during load power-up, the output current is clamped to a safety level, ILIMH, by operating the output power MOSFET in the active region

### 3.4 External PowerMOS low side VDS monitoring

The VDS\_monitoring function has the ability to sense the OUTPUT Mosfet source voltage and compare it to a predetermined threshold. This threshold is programmable, using an internal reference current IREF\_OVL\_LSD = 50  $\mu$ A (typ.) and an external resistor connected at VREF\_OVL\_LS external pin.

This protection will be activated when the low side Power Mos is switched ON and its gate is fully charged: to guarantee this condition the function will detect a short to battery event only when PWM = H and after a blanking time tfil\_OVL\_LS= 2.2  $\mu$ s (typ.) starting from PWM rising edge. This feature is present for each LSD leg.

In case of fault conditions caused by Power Limitation or overtemperature or open load/short to VCC in OFF state, the fault is indicated by the MultiSense pin being internally switched to a "current limited" voltage source pulled to level V<sub>SENSEH</sub>.

# 4 Typical application schematic

Figure 16. Typical application schematic

Note: To protect the device against Battery disconnection with energized inductive load when the bridge driver goes into 3-state, suggested  $C(V_{CC})$  is:

$$c(V_{CC}) = \frac{E_{motor}}{0.5DV_{CC,max}^2}$$

where:

$E_{motor} = 33.5 \text{ mJ}$ ;

$DV_{CC,max} = V_{CC\_AMR} - V_{CC\_max}$ ;

$V_{CC\_AMR} = 38 \text{ V}$ ;

$V_{CC\_max} = 26 \text{ V}$  ( $V_{CC}$  at jump start);

$C(V_{CC}) = 470 \mu\text{F}$

## 5 MultiSense operation

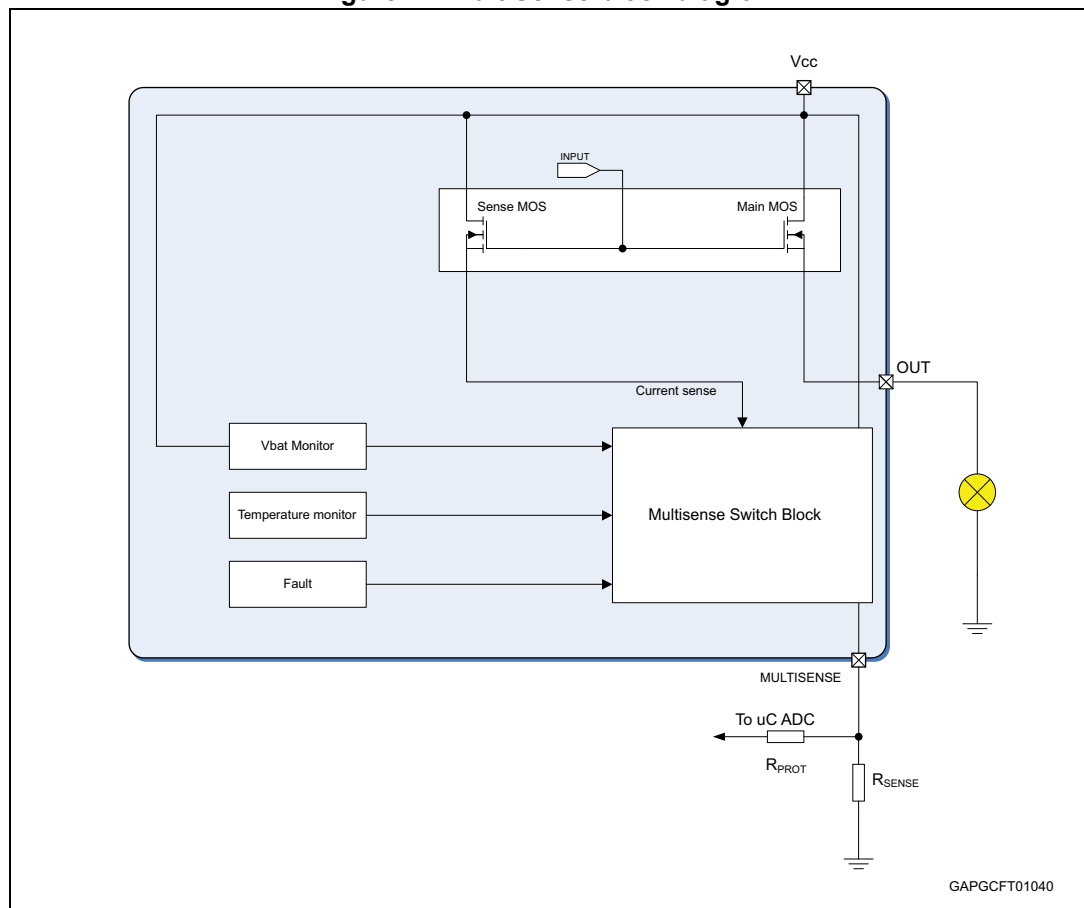

### 5.1 MultiSense analog monitoring

Diagnostic information on device and load status are provided by an analog output pin (MultiSense) delivering the following signals:

- Current monitor: current mirror of HSDx output current
- VCC monitor: voltage propotional to VCC
- TCASE: voltage propotional to chip temperature

Those signals are routed through an analog multiplexer which is configured and controlled by means of SELx and SEn pins, according to the address map in [Table 12](#).

Figure 17. MultiSense block diagram

### 5.2 Multisense diagnostics flag in fault conditions

Multisense pin delivers fixed voltage (VSENSEH) with a certain current capability in case of:

- fault condition on activated high-side triggered by Power Limitation
- fault condition on activated high-side triggered by overtemperature protection
- fault condition on VDS of Low side exceeded threshold

## 6 VREG and Driver\_LS Block

VREG pin is the output of an internal low drop voltage regulator. VREG block is designed to power the driver of external power Mosfet (Driver\_LS) and it allows a proper MOS transition.

- VREG out voltage will be VREG=10V if Vbattery > 10V, while VREG = Vbattery if Vbattery < 10V.

An external capacitor C<sub>REG</sub> = 100 nF connected to the pin VREG is needed to proper polarize the circuit (see [Figure 16](#)).

## 7 Reverse battery protection

CP pin provides the necessary gate drive for an external n-channel PowerMOS used for reverse polarity protection. The external N-channel Power MOSFET used for the reverse battery protection should have the following characteristics:

- BVdss > 20 V (for a reverse battery of -16 V);
- RDS(on) < 1/3 of H-bridge total RDS(on)
- Standard Logic Gate Driving

## 8 Open-load detection in off-state

The Open Load (OL) detection in off-state operates when output is deactivated (means INA = INB = PWM=0, or INB together with PWM=0). Open load detection is performed by reading the MultiSense output. External (switched) pull-up resistor has to be used and dimensioned to pull output voltage above the maximum open load detection voltage (VOL MAX) when load is not connected and as well stays below the minimum level (VOL MIN) when load is connected.

When the open load is detected, VsenseH is indicated on Multisense pin, possible conditions are specified in [Table 14](#).

If pull up resistor is applied over switched circuitry, it allows to detect short to VCC from open-load (see [Figure 16](#)).

The RPU value has to be:

$$R_{\text{pull\_up}} < \frac{V_{\text{BATTmin}} - V_{\text{OLmax}}}{2 \times I_{\text{L(off2)min}} [ @VOLmax ]}$$

## 9 Immunity against transient electrical disturbances

The immunity of the device against transient electrical emissions, conducted along the supply lines and injected into the VCC pin, is tested in accordance with ISO7637-2:2011 (E) and ISO 16750-2:2010.

The related function performance status classification is shown in [Table 15](#).

Test pulses are applied directly to DUT (Device Under Test) both in ON and OFF-state and in accordance to ISO 7637-2:2011(E), chapter 4. The DUT is intended as the present device only, without components and accessed through VCC and GND terminals.

Status II is defined in ISO 7637-1 Function Performance Status Classification (FPSC) as follows: "The function does not perform as designed during the test but returns automatically to normal operation after the test".

**Table 15. IISO 7637-2 - electrical transient conduction along supply line**

Test pulse 2011(E)	Test pulse severity level with status II functional performance status		Minimum number of pulses or test time	Burst cycle/pulse repetition time		Pulse duration and pulse generator internal impedance
	Level	$U_S^{(1)}$		min.	max.	
1	III	-112 V	500 pulses	0.5 s		2 ms, 10 $\Omega$
2a	III	+55	500 pulses	0.2 s	5 s	50 $\mu$ s, 2 $\Omega$
3a	IV	-220 V	1h	90 ms	100 ms	0.1 $\mu$ s, 50 $\Omega$
3b	IV	+150 V	1h	90 ms	100 ms	0.1 $\mu$ s, 50 $\Omega$
4 <sup>(2)</sup>	IV	-7 V	1 pulse			100 ms, 0.01 $\Omega$
<b>Load dump according to ISO 16750-2:2010</b>						
Test B <sup>(3)</sup>		40 V	5 pulse	1 min		400 ms, 2 $\Omega$

1.  $U_S$  is the peak amplitude as defined for each test pulse in ISO 7637-2:2011(E)
2. Test pulse from ISO 7637-2:2004(E)
3. With 40 V external suppressor referred to ground ( $-40\text{ }^\circ\text{C} < T_J < 150\text{ }^\circ\text{C}$ )

# 10 Package and PCB thermal data

## 10.1 PowerSSO-36 thermal data

Figure 18. PowerSSO-36 PCB board

Table 16. PCB properties

Dimension	Value
Board finish thickness	1.6 mm +/- 10%
Board dimension	129 mm x 86 mm
Board material	FR4
Cu thickness (outer layers)	0.070 mm
Cu thickness (inner layers)	0.035 mm
Thermal via separation	1.2 mm
Thermal via diameter	0.3 mm +/- 0.08 mm
Cu thickness on vias	0.025 mm
Footprint dimension	4.1 mm x 6.5 mm

Figure 19. Rthj-amb vs PCB copper area in open box free air condition

Equation 1: pulse calculation formula

$$ZTH\delta = RTH \cdot \delta + ZTHtp (1 - \delta)$$

where  $\delta = tP/T$

Figure 20. Thermal fitting model of a double-channel HSD in PowerSSO-36

Note: The fitting model is a simplified thermal tool and is valid for transient evolutions where the embedded protections (power limitation or thermal cycling during thermal shutdown) are not triggered.

Table 17. Thermal parameters

Area / island	FP	2	8	4L
R1 (°C/W)	0.75			
R2 (°C/W)	1			
R3 (°C/W)	2	2	2	1
R4 (°C/W)	7	6	6	4
R5 (°C/W)	20	14	10	2

Table 17. Thermal parameters (continued)

Area / island	FP	2	8	4L
R6 (°C/W)	30	26	15	7
R7 (°C/W)	0.75			
R8 (°C/W)	1			
C1 (W•s/°C)	0.0027			
C2 (W•s/°C)	0.006			
C3 (W•s/°C)	0.05	0.05	0.05	0.05
C4 (W•s/°C)	0.15	0.2	0.2	0.2
C5 (W•s/°C)	1	2	3	10
C6 (W•s/°C)	3	5	9	18
C7 (W•s/°C)	0.0027			
C8 (W•s/°C)	0.006			

# 11 Package and packing information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com).

ECOPACK is an ST trademark.

	Min.	Typ.	Max.
eee	0.1		
fff	0.2		
ggg	0.15		

1. Dimensions D and E1 do not include mold flash or protrusions. Allowable mold flash or protrusions is '0.25 mm' per side D and '0.15 mm' per side E1. D and E1 are Maximum plastic body size dimensions including mold mismatch.

## 11.2 PowerSSO-36 packing information

**Figure 23. PowerSSO-36 tube shipment (no suffix)**

Figure 24. PowerSSO-36 tape and reel shipment (suffix "TR")

### 11.3 PowerSSO-36 marking information

Figure 25. PowerSSO-36 marking information

*Note: Engineering Samples: these samples can be clearly identified by a dedicated special symbol in the marking of each unit. These samples are intended to be used for electrical compatibility evaluation only; usage for any other purpose may be agreed only upon written authorization by ST. ST is not liable for any customer usage in production and/or in reliability qualification trials.*

*Note: Commercial Samples: fully qualified parts from ST standard production with no usage restrictions.*

## 12 Order codes

**Table 19. Device summary**

Package	Order codes	
	Tube	Tape and reel
PowerSSO-36	VNHD7008AY	VNHD7008AYTR

## 13 Revision history

**Table 20. Document revision history**

Date	Revision	Description of changes
11-Feb-2016	1	Initial release.
14-Jul-2017	2	<p>Updated table in Section: <i>Features</i>.</p> <p>Updated values in <i>Table 3: Absolute maximum ratings</i> and added note.</p> <p>Updated Max. value in <i>Table 4: Thermal data</i>.</p> <p>Updated <i>Table 5: Power section</i>.</p> <p>Updated <i>Table 8: Low-side driver parameters (VCC = 13 V)</i>.</p> <p>Updated <i>Table 9: Protections and diagnostics (7 V &lt; VCC &lt; 18 V; -40 °C &lt; Tj &lt; 150 °C)</i>.</p> <p>Updated <i>Table 10: MultiSense (7 V &lt; VCC &lt; 18 V; -40 °C &lt; Tj &lt; 150 °C)</i>.</p> <p>Added <i>Figure 6: Input reset time for HSD-fault unlatch</i>.</p> <p>Added <i>Section 3: Protections Section 4: Typical application schematic Section 5: MultiSense operation, Section 6: Reverse battery protection, Section 7: Open-load detection in off-state, Section 8: Immunity against transient electrical disturbances, Section 9: Package and PCB thermal data</i>.</p>
03-Nov-2017	3	<p>Updated <i>Figure 1, Table 2: Pin definitions and functions</i>.</p> <p>Added <i>Table 3: Suggested connection for unused and not connected pins</i>.</p> <p>Updated <i>Table 4: Absolute maximum ratings, Table 6: Power section, Table 9: Gate driver for external MOS parameters (VCC = 13 V), Table 10: Protections and diagnostics (7 V &lt; VCC &lt; 18 V; -40 °C &lt; Tj &lt; 150 °C), Table 11: MultiSense (7 V &lt; VCC &lt; 18 V; -40 °C &lt; Tj &lt; 150 °C)</i>.</p> <p>Added <i>Figure 5: Definition of the low-side switching times and Figure 6: Definition of the high-side switching times</i>.</p> <p>Updated <i>Table 13: On-state fault conditions- truth table</i>.</p> <p>Added <i>Figure 14: Gate driver low side rise time normalized vs Cg = 4.7nF and Figure 15: Gate driver low side fall time normalized vs Cg = 4.7nF, Section 5.2: Multisense diagnostics flag in fault conditions and Section 6: VREG and Driver_LS Block, Figure 21: Thermal impedance junction ambient single pulse and Table 17: Thermal parameters</i>.</p> <p>Minor text changes.</p>
11-Dec-2017	4	<p>Document status promoted from target to production data.</p> <p>Updated features in cover page.</p> <p>Minor text changes.</p>

Table 20. Document revision history (continued)

Date	Revision	Description of changes
29-Jan-2018	5	Typo error.
01-Apr-2020	6	Updated <a href="#">Table 4: Absolute maximum ratings</a> (add $V_{BAT}$ and $V_{CP}$ values). Updated <a href="#">Table 10: Protections and diagnostics (<math>7 V &lt; V_{CC} &lt; 18 V</math>; <math>-40\text{ }^{\circ}\text{C} &lt; T_j &lt; 150\text{ }^{\circ}\text{C}</math>)</a> (changed Min. value in $t_{DEL\_OVL\_LSD}$ ; added Min. and Max. value in $V_{GS\_CP}$ ). Updated <a href="#">Figure 19: <math>R_{thj-amb}</math> vs PCB copper area in open box free air condition</a> . Updated <a href="#">Figure 21: Thermal impedance junction ambient single pulse</a> . Updated <a href="#">Table 17: Thermal parameters</a> .
