### NOTES

In October of 2018, Logic PD announced the End of Life (EOL) of four SOM models from the Torpedo and Torpedo + Wireless families. The SOM Model numbers were:

#### Torpedo

- SOMDM3730-20-1880AGIR
- SOMDM3730-20-2880AGXR

#### Torpedo + Wireless

- SOMDM3730-32-1880AGIR
- SOMDM3730-32-2880AKXR

This EOL was due to the obsolescence of the Micron PoP memory device (manufacturer part number: MT29C4G96MAZBBCJV-48 IT) included on these SOMs. Since that time, Beacon EmbeddedWorks has acquired a supply of the memory part originally obsoleted allowing us to offer these SOM models once again. We would like to make them available to customers that need them. The number of memory parts are limited, therefore the number of SOM's we can build is limited. Because of the limited supply, we recommend these SOM not be used for new designs, but if customers can utilize these SOMs to extend the life of their products we are offering them an opportunity to purchase more.
