

# Artemis Global Tracker Hookup Guide

WRL-18712

The **SparkFun Artemis Global Tracker** provides a powerful tracking system combining remote short messaging via the Iridium satellite network with GPS tracking and environmental sensing all powered by the SparkFun **Artemis module**. The Global Tracker design focuses on truly remote tracking, data collection and transmission so whether you're looking to transmit environmental data from the top of a mountain, send data from a traveling balloon, control and monitor remote equipment or maybe communicate in an emergency when other networks are not available; the Artemis Global Tracker may be just the right tool for your remote data project.
