

DME 635 and epc635 Evaluation Kit

Summary

We will discontinue the production and sale of our DME 635 and epc635 Evaluation Kit due to low demand. We recommend using the TOFcam-635 and Software Development Kit, or the DME 660 and epc660 Evaluation Kit with an epc635 Chip Carrier as alternative solutions to evaluate the epc635.

Affected Products

P100 519	DME 635
P100 411	epc635 Evaluation Kit

Alternatives

Although we will discontinue the DME 635 and epc635 Evaluation Kit, we offer two alternative solutions to evaluate the epc635:

- TOFcam-635 (P100 531 + P100 539) and Software Development Kit (P100 677)**
 The TOFcam-635 is a time-of-flight camera that uses the epc635 as its core component. The Software Development Kit P100 677 (TOFcos-635) is also available to facilitate the evaluation process. The TOFcam-635 offers similar functionality to the DME 635 and can be used as a substitute for it.
- DME 660 (P100 518) and epc660 Evaluation Kit (P100 280) with epc635 Chip Carrier (P100 404)**
 The DME 660 and epc660 Evaluation Kit offers similar functionality to the epc635 Evaluation Kit. If necessary, an epc635 Chip Carrier can be used to achieve the full functionality of the DME 635. The DME 660 and epc660 Evaluation Kit is a versatile evaluation tool that can be used for a wide range of applications.

Both of these alternatives offer effective ways to evaluate the epc635. We recommend evaluating the compatibility of these alternatives with your specific applications and requirements to determine which option is best suited for your needs. If you have any questions or concerns about these alternatives or require assistance in choosing the right solution, please contact our customer support team. Our team is available to assist you with any inquiries or assistance that you may need.
