

PRODUCT NOTICE

Phase out of 3M™ Adflo™ High Altitude Powered Air Purifying Respirator (PAPR)

February 2021

The standard Adflo PAPR is being upgraded with air density compensation functionality so that the High Altitude Adflo PAPR can be phased out.

The upgraded standard version will provide the same functionality as the existing High Altitude version.

Implementation timeline

Implementation of the upgraded version will start during Q1 2021 and there will be no new part numbers to set-up.

After May 31st, 2021 it is estimated that all standard Adflo PAPRs shipped from 3M should be with the new upgraded version, i.e. including air density compensation

All system kits for G5-01 including Adflo PAPRs will automatically be updated with corresponding upgraded version and therefore continue delivering the specified functionality for high altitude performance.

The completed upgrade of the existing standard Adflo PAPR does not impact 3M's pricing or part numbers. Once this implementation is complete, the products below will be discontinued and BCom orders will be flipped to the alternate product below.
