## 2B.704 Insulators Updated with Pinout Trail

### Summary:

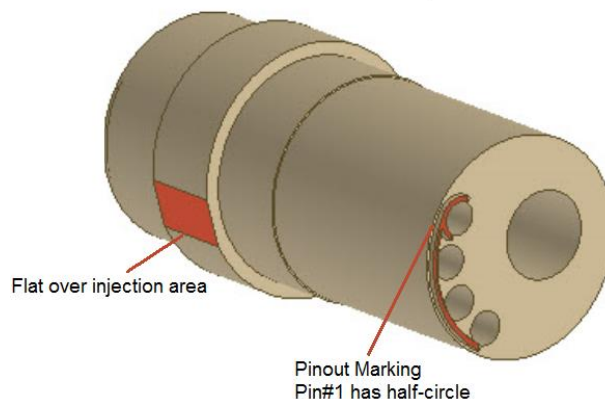

LEMO's 2B.704 insulators now have a marking for the pinout trail and a flat over the injection area. These insulators are used in the B, K, T and W Series. There is no change to fit or function. The form has changed as described in the details below.

### Details:

To ease identification of pin numbering, the pinout trail has been added for both male and female insulators for the 2B.704 type. Also, a flat has been added over the injection area (as shown in the example below).

Both component and parent-level part numbers will remain the same.

Female Insulator Example

### Timing of change:

The female insulator will be available in approximately 6 months and the male insulator in approximately 12 months.
